Mohammed Rangoonwala

Nagpur, Maharashtra | codingfanatic53@gmail.com | linkedin.com/in/mohammedrangoonwala | github.com/Batmn53

Professional Summary

Backend Developer and Computer Science student with a strong focus on designing scalable server-side architectures, RESTful APIs, and real-time data pipelines. Proficient in Node.js, Java, and modern database management (PostgreSQL, Redis). Experienced in leveraging message brokers like Apache Kafka and containerization tools like Docker to build robust, high-throughput backend systems. Adept at translating complex business logic into efficient, maintainable, and secure backend infrastructure.

Education

Symbiosis Institute of Technology — Nagpur, Maharashtra
Bachelor of Technology in Computer Science – ***Current CGPA: 7.0*** — *Expected Graduation: 2028*

- **Relevant Coursework**: Data Structures, Algorithms, Distributed Systems, Database Management.

Bhawanipur Gujarati Education Society School (BGESS) — Kolkata, West Bengal
Class 12 (ISC) – ***Computer Science: 95%, Physics: 92%*** — *2023*

- **Competitive Exams**: Scored 92 Percentile in JEE Mains Physics.

Saifee Hall Golden Jubilee English Public School (SGJEPS) — Kolkata, West Bengal
Class 10 (ICSE) — *2021*

- **Key Scores**: Computer Applications: 100%, Biology: 95%, Physics: 80%, Chemistry: 80%.

Technical Skills

Backend Languages: Node.js (JavaScript/TypeScript), Java, Python, Rust
Databases & Caching: PostgreSQL, SQL, Redis
Infrastructure & Messaging: Docker, Apache Kafka, WebSockets
Tools & Architecture: Git, REST APIs, Microservices Awareness, Object-Oriented Programming (OOP)
Frontend Awareness: React, React Native, HTML/CSS

Technical Projects

Real-Time Collaborative Workflow Engine | *Node.js, Kafka, Redis, PostgreSQL, Docker* — January, 2026

- Architected the backend infrastructure for a high-concurrency workflow engine, containerizing services with Docker for scalable deployment.
- Integrated Apache Kafka as a high-throughput message broker to handle real-time event streaming between distributed backend services.
- Implemented Redis for fast, in-memory caching and session management, while utilizing PostgreSQL for persistent, relational data storage.

Telora - Smart Expense Manager Backend | *Node.js, REST APIs* — March, 2026 – Present

- Developed the server-side logic and RESTful APIs for a personal finance tracker, enabling secure user data synchronization and transaction processing.
- Engineered backend scripts to parse, categorize, and store financial data, applying complex algorithmic logic to generate personalized financial insights.
- Focused on data security and efficient database querying to handle rapidly scaling transactional data sets.

Interactive Java Ping Pong Game | *Java, Object-Oriented Programming (OOP)* — July, 2025 – August, 2025

- Engineered a classic arcade game from scratch leveraging core Java and strict Object-Oriented Programming principles.
- Developed the internal game logic, including custom physics for collision detection, game loops, and responsive computer AI behavior.
